IN THE CLAIMS:

A complete listing of the pending claims is provided pursuant to 37 C.F.R. § 1.121(c)(1).

- 1. (Withdrawn) The method of claim 11 wherein the treatment is for a behavioral disorder in the patient in need of such treatment, and where the amount is effective to provide a concentration of clavulanic acid in the brain of said patient sufficient to modify patient behavior.
- 2. (Previously presented) The method of claim 11 wherein the treatment is for enhancing cognitive function in the patient suffering from a condition characterized by impaired cognitive function, and wherein the amount is effective to provide a cognition enhancing concentration of clavulanic acid in the brain of said patient.
- 3. (Original) The method of claim 2 wherein the patient is a human patient suffering from dementia or amnesia.
- 4. (Withdrawn) The method of claim 2 wherein the patient is a human patient suffering from Alzheimer's Disease.
- 5. (Original) The method of claim 2 further comprising the step of administering an effective amount of a P-glycoprotein efflux pump inhibitor.
- 6. (Original) The method of claim 2 wherein the compound is administered in combination with an effective amount of a P-glycoprotein efflux pump inhibitor.
- 7. (Withdrawn) A method of treating a human patient afflicted with a condition, or having a medical history predictive of the development of a condition characterized at least in part by abnormal extracellular glutamate concentration in the brain or other nervous tissue, said method comprising the step of administering to said patient a composition comprising a neurologically effective amount of compound selected from the group consisting of clavulanic acid, pharmaceutically acceptable salts thereof, and active ester forms thereof that are hydrolyzed *in vivo* to clavulanic acid in neurologically effective quantities.

- 8. (Withdrawn) The method of claims 7 wherein the condition is selected from the group consisting of ischemia, epilepsy, hypoglycemia, Huntington's disease, Alzheimer's disease, Parkinson's disease, Amyotrophic Lateral Sclerosis (ALS), chronic pain, and nervous tissue trauma.
- 9. (Withdrawn) The method of claim 7 wherein the patient condition is nervous tissue ischemia resulting from a temporary interruption of blood flow to said tissue.
- 10. (Withdrawn) A method of treating prostate disease selected from prostate cancer or benign prostatic hyperplasia in a human patient, said method comprising the step of administering to said patient a composition comprising a compound selected from the group consisting of clavulanic acid, pharmaceutically acceptable salts, and ester forms thereof that are hydrolyzed *in vivo* to clavulanic acid, wherein said compound is administered in an amount effective to retard the progress of the disease or to reduce the symptoms of the disease.
- 11. (Previously presented) A method for treatment of cognitive disorders in a human patient in need of said treatment, said method comprising the step of administering to said patient a compound selected from the group consisting of clavulanic acid, a salt thereof, and an active ester form thereof that are hydrolyzed *in vivo* to clavulanic acid, in an amount effective to modulate neurogenic carboxy peptidase or transpeptidase activity in the brain.
- effective for treatment of behavioral and cognitive disorders in a human patient in need thereof, said formulation comprising a compound selected from the group consisting of clavulanic acid, pharmaceutically acceptable salts, and active ester forms thereof that are hydrolyzed *in vivo* to clavulanic acid, and a pharmaceutically acceptable carrier therefor, the amount of said compound in said unit dosage being effective to provide a concentration of clavulanic acid in the brain sufficient to modulate cognitive or behavioral performance of said patient, said unit dosage form being without concomitant effective antibacterial activity in said patient.

- 13. (Withdrawn) The pharmaceutical formulation of claim 12 further comprising an effective amount of a P-glycoprotein efflux pump inhibitor.
- 14. (Withdrawn) The pharmaceutical formulation of claim 12 wherein the formulation is an oral dosage form.
- 15. (Withdrawn) The pharmaceutical formulation of claim 12 wherein the formulation is a parenteral dosage form.
- 16. (Withdrawn) The pharmaceutical formulation of claim 12 wherein the formulation is a prolonged release dosage form.
- 17. (Withdrawn) A method for treating a patient afflicted with or disposed to develop a disease characterized by abnormally elevated glutamate concentrations in neuronal tissue or elevated NAALADase levels in prostate tissue, said method comprising the step of administering to said patient clavulanic acid or a pharmaceutically acceptable salt or ester form thereof that is hydrolyzed *in vivo* to clavulanic acid.
